

SUMMARY

Versatile Software Engineer with 4 years of experience, currently leading a 7-member team at a fast-paced tech startup. Skilled in AI-powered solutions development, cloud infrastructure, CI/CD automation, and FinOps optimization. Proven ability to build reliable products, drive efficiency and revenue growth, and mentor junior engineers.

WORK EXPERIENCE

BEBRIDGE AI (Seoul, South Korea)

Tech Lead | May 2023 – Present

- **AI Video Chunking Pipeline:** Developed AI-powered pipeline for chunking long videos into meaningful short clips, attracting two B2B clients and generating significant revenue. (Transcription, Topic Modeling, LLMs, FFMPEG, FastAPI, GCS, MySQL)
- **Podcast to Blog Conversion:** Created a pipeline that uses AI agents to transform podcasts into high-quality blog articles, securing two B2B contracts. (Transcription, LLM Agents, Microservices)
- **Enhanced Team Productivity:** Implemented automated DORA metrics and used them to double deployment frequency to 1.6/day, reduce change lead time by 40%, deployment time by 68%, increase throughput by 38% (37 PRs/week), and improve the time to first review by 75%. (Swarmia, Agile)
- **Global Infrastructure, CI/CD, and FinOps Leadership:** Spearheaded the deployment and management of global infrastructure across GCP and AWS, ensuring robust, scalable solutions. Architected and automated CI/CD pipelines for web apps, APIs, and backend services, reducing deployment times by over 90%. Led FinOps initiatives to continuously monitor and optimize infrastructure costs, enhancing operational efficiency and significantly extending the company's financial runway. (AWS, GCP, Serverless, CI/CD)
- **Mentoring Junior Engineers:** Provided guidance and mentorship to junior engineers, enhancing their skills, accelerating their professional growth, and improving overall team performance.

AMAZON (Vancouver, Canada)

Software Engineer II (L5) Aug 2022 - offer rescinded due to economic conditions

BEBRIDGE AI (Seoul, South Korea)

Backend Engineer | Jul 2021 ~ May 2023

- **Recurring Payment System Implementation:** Developed a backend system for scheduling and executing recurring payments. More than 50% of the company's revenue now passes through this system. (Python, Node.js, AWS: EventBridge, Lambda, Secret Manager, IAM, S3)
- **Usage-Based Pricing System Implementation:** Led implementation of a usage-based pricing plan with monthly quotas. Developed backend logic to enforce plan limitations and deployed a microservice for daily quota renewal, resulting in a 20% increase in the conversion rate of a b2c product. (Python, Node.js, AWS: EventBridge, Secret Manager, Lambda, IAM, S3)
- **Multi-Regional Serverless Image Uploads:** For a B2C note-taking product, designed and implemented a multi-regional architecture with secure and efficient image uploads using Pre-Signed URLs. This resulted in over 30% latency reduction for users in the US and India, and 50% faster note loading times. (AWS: Route 53, API Gateway, Lambda, S3)
- **Admin Panel for Customer Support Team:** Developed an admin panel that gives the customer support team, easy and safe access to the database, and automates tedious operations they would otherwise do manually. This increased CS team productivity by 40%, as measured by the time taken to address a customer's request. (Python, Django, MySQL)

Frontend Engineer | Dec 2020 – Jul 2021

- **Cross-Platform Desktop Application Development:** Developed Slid desktop applications for Mac and Windows from scratch, incorporating auto-update support and delivering 17 releases in 7 months. These applications are used by over 33% of a 40,000+ learner customer base. (Javascript, React, Electron)
- **UI Testing Adoption:** Spearheaded the adoption of UI testing within the team using the Cypress testing library, enhancing the reliability and quality of the user interface. (Javascript, React, Cypress)
- **Frontend Performance Optimization:** Proposed and implemented code splitting in the frontend codebase, leading to a 10-20% improvement in the initial load time of the business's core website. (Javascript, React)

Barun ICT Research Center (Seoul) ICT Researcher (Intern)

Sept 2020 ~ Jan 2021

- Researched on topics: Cloud Computing, AI & Big data and wrote monthly articles for the institution.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate (Issued: May 14,2022 Valid Until: May 14, 2025)

EDUCATION

- Yonsei University (South Korea): B.Sc. in Biotechnology (2017-2022)

ADDITIONAL EXPERIENCES/PROJECTS

- **PANSA (2020):** Developed the front-end for a coding assignments management platform featuring an in-browser code editor with support for remote code execution against custom test cases. (JS, React)
- **TM Money Trans (2020):** End-to-end development of a web application for a money transaction service, used by many Africans in Korea to send money home. (Python, Django, PostgreSQL, Javascript, React)

PROGRAMMING LANGUAGES AND TECHNOLOGIES

- **Fields of Knowledge:** AI Solutions Development, System Design, Cloud Development, API, Frontend Web, Cross-Platform Desktop Development, Chrome Extensions, Relational & NoSQL Databases, Data Structures & Algorithms, FinOps, Dev-Team Leadership.
- **Programming languages:** Proficient: Python & Javascript | Some Exposure: TS, Rust, Go, Java, C++
- **Technologies:** AWS, GCP, CI/CD, Serverless, SQL & NoSQL databases, Version Control, Linux, Django, FastAPI, React, Redux, Etc...

AWARDS

- Academic Excellence Award, Yonsei University, 2019
- Grand Prize, Korean Speech Contest, Silla University (2016)
- Korean Government Scholarship (2016)
- Grand Prize, National Science Competition, Physics (2014)

SPOKEN LANGUAGES

English, Kinyarwanda, Korean, French (basic)
